Hemorrhoids can mask symptoms of colorectal cancer, the second leading cause of cancer death in the United States, and until now, painful surgery was frequently recommended to treat hemorrhoids. Heritage Valley Gastroenterologist, Sharon R. Roseman, MD, FACP is now providing a treatment protocol that is clinically proven and utilizes the proprietary and patented *CRH O'Regan System™*, which is effective, safe and painless.

The *CRH O'Regan System™* is only available to consumers through specially trained and licensed medical providers. This highly effective (99.1%), minimally invasive procedure is performed in the office in less than 60 seconds. This method offers a significant advance in the rubber band ligation technique for effective outpatient treatment of hemorrhoids. Unlike other techniques that use a metal clamp to grasp the hemorrhoid during banding, the *CRH O'Regan System™* uses a smaller and gentler suction device to minimize discomfort and complications.

While other methods rely on re-useable instrumentation, the patented *CRH O'Regan System™* instrument is 100% disposable and single use. This eliminates the risk of transferring infectious diseases such as HIV and hepatitis B and C from patient to patient due to inadequately sterilized instrumentation. The CRH-O' Regan Disposable Hemorrhoid Banding System is the only treatment that requires no pre-or post pain medication, virtually no recovery time and is covered by insurance.
